Summary

Motivated M.Sc. in Computer Science student with a passion for software development. I have extensive knowledge and working experience in OOP development and design, and a proven track record of delivering high-quality results. Seeking a challenging software development role where I can utilize my skills and continue to learn and grow.

Professional Experience

Lead Software Automation Testing Engineer, Biosense Webster (2022 - present)

- Assessing, designing, and implementing software solutions to achieve fast, dependable, unbiased, and accurate system validation.
- Increasing automated tests coverage and stretching the system's limits whilst creating a modular infrastructure to interact with every aspect of the system.
- Having frequent interactions with all different departments of the project.
- Helping other AT team members, from other projects, with their hard to solve issues.

Software Quality Assurance Engineer, Biosense Webster Yokneam (2021 - 2022)

- Ensure thorough documentation and meet project deadlines.
- Tested compatibility with numerous medical devices, including: Ultrasound machines, RF Generators, Fluoroscopy Machines (X-Ray), etc.
- Travel abroad to test and validate compatibility with different Fluoroscopy machines.

Assembly and OS Instructor, "Magshimim" Cyber Education Center (2019 – 2021)

Instructed high-school students on Windows and Linux OS principles, as well as the Assemblyx8086 language.
